## About us

Safely and responsibly disposing of your old electronics and other assets is our business. We are a registered recycler with the Georgia Environmental Protection Division, and have an expansive network R2-certified downstream partner vendors.

Desktop Disposal has been in business for over 20 years, and we process thousands of assets each month from Fortune 500 companies, school systems, municipalities, data centers, and corporations nationwide.

We offer competitive solutions with custom pricing to fit the needs of your project, and can integrate ourselves into your processes to make recycling easier in the future.

Using Desktop Disposal to recycle your decommissioned IT assets is a great way to efficiently clear clutter and make room for new or updated technologies without exposing your company, clients, customers, students, and/or vendors to unnecessary risk.

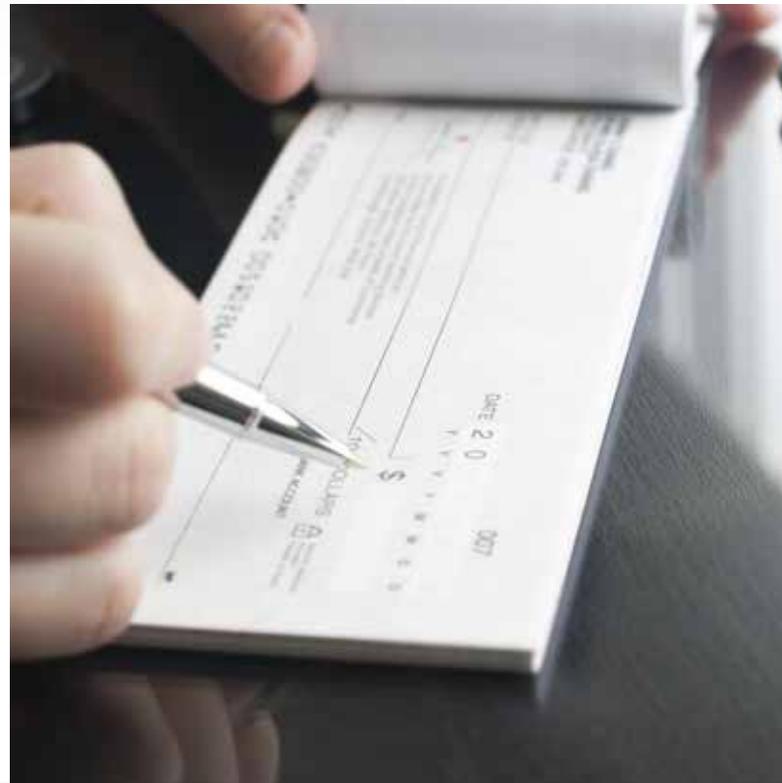

All of our data destruction methods are NIST 800-88 compliant.

## IT Equipment Buyouts

Desktop Disposal offers financial compensation for quantities of functional equipment that is 3-5 years old. We will ask for an inventory list or pictures of the equipment that is available -- if necessary, we can even send a representative to your location to perform an on-site inventory, so that we ensure that we will provide you with the best bid possible. We are willing to pay top dollar for re-marketable assets from our best sources.

## IT Equipment De-Installation

In some cases, our technicians and subcontractors are contracted to de-install electronic equipment from offices or data centers. We stage and safely prepare those assets for shipment to our warehouse. Give us a call if you need trained hands to help with major moves.

## Fast Pickup and Logistics

Desktop Disposal is a nationwide service provider. We specialize in companies with multiple locations - no matter how many. We use our own company trucks to service companies within a few hundred miles of Atlanta. For more- distant jobs, we utilize a proven network of freight logistics specialists.

## Sorting, Testing & Repair

We process, sort, test, and inventory your equipment at our electronics recycling facility in Marietta, Georgia. We test the equipment for functionality to ensure that we divert as many devices from the waste stream as possible. Non-functional devices that are deemed valuable will be repaired by our technicians, and the remainder of the equipment will be broken down as scrap material. We comply with all local and national regulations for the safe disposal and re-purposing of your equipment.

Desktop Disposal only utilizes R2-certified downstream vendors to assure that all scrap materials are handled appropriately.

## Audits and Inventory Lists

We offer flexible auditing and inventorying options to meet the requirements of our customers. Our detailed inventory list provides brand, model, serial number, all asset tag numbers and other predetermined information. We have developed an integrated custom inventory database application to quickly adjust these reports to meet your needs.

### Data Destruction Guarantee

When our technicians process your equipment, they destroy all traces of your data. We use three pass erasure and verification software that goes above and beyond NIST specifications. Failed hard drives and all other magnetic media are shredded at our secure site. We also offer options to destroy all hard drives, or to physically destroy all equipment.

Desktop Disposal is your one source for data destruction, electronics decommissioning and asset disposal. We provide a single point of contact. We take responsibility for timely and safe off-site and onsite data destruction of hard drives, optical media and tapes. We provide a Certificate of Data Destruction for each pickup, which can include a serial number inventory list.

### Onsite Shredding Services

If your internal safety programs necessitate onsite shredding of hard drives or media, Desktop Disposal can arrange for or directly provide onsite shredding services. Our technology allows full recording of the destruction process including serialization; if necessary, we can even provide video records of the destruction.

### Our Recycling Process

We process most scrap equipment at our facility in Marietta, GA. Computers, printers, and monitors are broken down into their base components: steel, aluminum, plastic, circuit board, glass, and copper. We are careful to only deal with downstream R2 certified vendors who meet our high standards.

### Remarketing

We re-market your equipment to end users and wholesalers worldwide. To give you the best deal, we maintain a large customer base in multiple markets. We get top dollar for your equipment. All exports comply with applicable laws and regulations. Materials that require R2 certified disposal are only shipped to our trusted downstream partners in the United States.

## Solar Panel Recycling

Desktop Disposal has assisted many major utility companies, solar installers, and companies looking to recycle their used or broken solar panels. In 2020, we successfully recycled nearly a half a million pounds of PV modules! With our nationwide reach, we are able to recycle solar panels in a manner that is safe and compliant with all local, state, and federal regulations anywhere in the contiguous United States. We offer transparent downstream information to clients upon request to ensure that there is no question as to where the recycled panels will wind up.

You palletize the panels, ship them to one of the dozens of processing facilities that we utilize throughout the country, and we take ownership of the material once it reaches our docks. You will receive a Certificate of Responsible Recycling within 30 days after your final shipment arrives.

If you need assistance with palletization and/or logistics, we can help guide you through that process as well!

Whether you have 500 panels or 50,000 panels, we can provide you with all of the advice necessary for a streamlined recycling process. We have resources available to recycle mono/polycrystalline, CdTe thin film, and CIGS panels.

Contact us today for advice, pricing, or to get started on shipping panels!

## X-ray and Laboratory Equipment Disposal

Desktop Disposal's x-ray and laboratory equipment disposal services make the process of recycling large, heavy, and hazardous equipment a simple process.

After speaking with one of our account managers, we can provide you with a disposal quote that encompasses all aspects of the disposal process: removal, logistics, and processing the device(s) in question, usually within 3-5 business days of getting the details. We utilize a network of R2-certified electronics recyclers that we are partnered with in areas where it is more cost-effective to do so, and provide transparent downstream information upon request to satisfy any local or state regulations with regards to the disposal of these types of devices.

From removing large, bulky x-rays meant to scan pallets of cargo for drugs or explosives, to a single x-ray in a small medical practice, to clearing out an entire decommissioned lab, we can help you dispose of your equipment in an environmentally sustainable and responsible manner.

Contact us today for advice, information, or to start the process of getting a quote for your disposal needs!
